INTRODUCTION

Students at Westmount School study courses based on the New Zealand Curriculum document.

Achievement is assessed against the standards of NCEA.

Our educational aim is to enable all students to reach their learning potential, with a broad range of skills and knowledge.

Students are offered the opportunity to develop a range of skills, knowledge and understanding in each course.

Students are encouraged to choose a course of study that provides a broad, balanced and inclusive selection across the curriculum areas.

Curriculum Areas:

- English
- Mathematics
- Sciences
- Social Sciences
- Commerce
- Technology Languages
- Physical Education

COURSE OVERVIEW

Curriculum Leaders, and Lead Teachers of a subject, have developed courses of study that are taught and assessed throughout Westmount School.

Each senior course outlined in this course selection book is the standard Westmount course for that subject area. There is a credit value of about 16-20 credits for each course, including both internal and external assessment.

More details about each subject will be given to students at the beginning of the school year as part of the Course Outline, including confirmed dates of assessments.

Students in Year 11 take six subjects, both Year 12 and 13 students take five subjects, plus CAP.

An Assessment Handbook gives details of the NCEA processes, including; resubmission, appeals, derived grade and special assessment conditions. Each student will receive a handbook at the beginning of the year.

Other standards for students with different learning needs (both for able and less able students) are available by application to National Office.

For all courses in the year 11-13 options list, there must be sufficient interest from students for a particular course to be taught.

COURSE ENDORSEMENTS

NZQA Course Endorsement

Students will gain an endorsement for a course where they achieve:

- 14 or more credits at Merit or Excellence recorded at the lower grade level of the standards that make up the endorsement
- At least 3 credits from externally assessed standards and 3 credits from internally assessed standards
- Sufficient credits in a single school year.
- Course Endorsement will be recorded on your NZQA Record of Achievement and is available on application to NZQA. Scholars Badge

Dux and Runner up at Y13,

Top Scholar at Y12 and Y11

These Academic awards will be awarded to the student at each year level with the best academic record and calculated using the Westmount Grade Point Average system.

COMMERCE DEPARTMENT OVERVIEW

YEAR 11-13

The Commerce Department includes the study of Year 9 and 10 Business; Accounting, Economics and Business Studies for NCEA courses. The Year 9 and 10 programme gives students a broad perspective on various Commerce topics and is designed to lead into more focused subject study for NCEA in Years 11-13.

Year 9 Business focuses on a range of topics that gives students a taste of the NCEA option subjects with scarcity and choice covering basic Economics, household budgeting preparing them for Accounting and consumer law, insurance and the market day all relating to Business Studies. Year 10 Business covers basic accounting for business, understanding the basics of marketing and the market day event relating to Business Studies and Investment and Risk topic which leads to understanding of basic Economics concepts.

All Year 11-13 Commerce courses are course endorsable.

Accounting enables students to develop the knowledge and skills to manage the financial affairs of individuals, communities and businesses.

Year 11 Accounting looks at sole trader businesses which may be either trading or service firms. Students will learn to prepare cash budgets for businesses for future planning, prepare financial statements to calculate profit and most importantly to interpret these statements to make informed business decisions. Year 11 focuses on learning the basics of manual accounting; this provides a great platform for the more complex computer processing at Year 12.

Year 12 Accounting looks in detail at businesses which use Accounts Receivable and Accounts Payable subsystems. Students will learn about the importance of inventory management and how a firm may do this. Preparation and interpretation of financial statements is again key to the year 12 programme with a significant focus on the period end adjustments. This year includes a combination of emphasis on manual and computer processing of transactions.

Year 13 Accounting studies two different types of entities; partnerships and companies. Students will discuss the merits of the different forms of business ownership. There will be an exploration of job costing systems. Time will be spent developing skills which provide decision-making tools for business management, e.g. cash budgeting and cost volume profit analysis.

Business and the Economy combines achievement standards from both Economics and Business Studies.

Year 11 Business & the Economy is designed to give students foundational understanding of core economics concepts such as production, demand and the market and how they all interact within the economy we operate in as business people. Students will also be required to take part in the BP Business Challenge 3-day event as a pre-cursor to participating in the business activity internal for Business Studies, which requires them to create a business plan and carry it out through a culminating market day activity.

Economics is the study of how consumers and producers make decisions with the scarce resources they have.

Year 12 Economics introduces students to key economic issues such as inflation, trade and growth. Students are then able to demonstrate understanding of these issues by using economic concepts and models. Students will also investigate how government policy and contemporary economic issues interact. Each of these issues will have an impact on the local and global business environment so a study of economics at this level will allow students to understand the impact of economic events on their local business community.

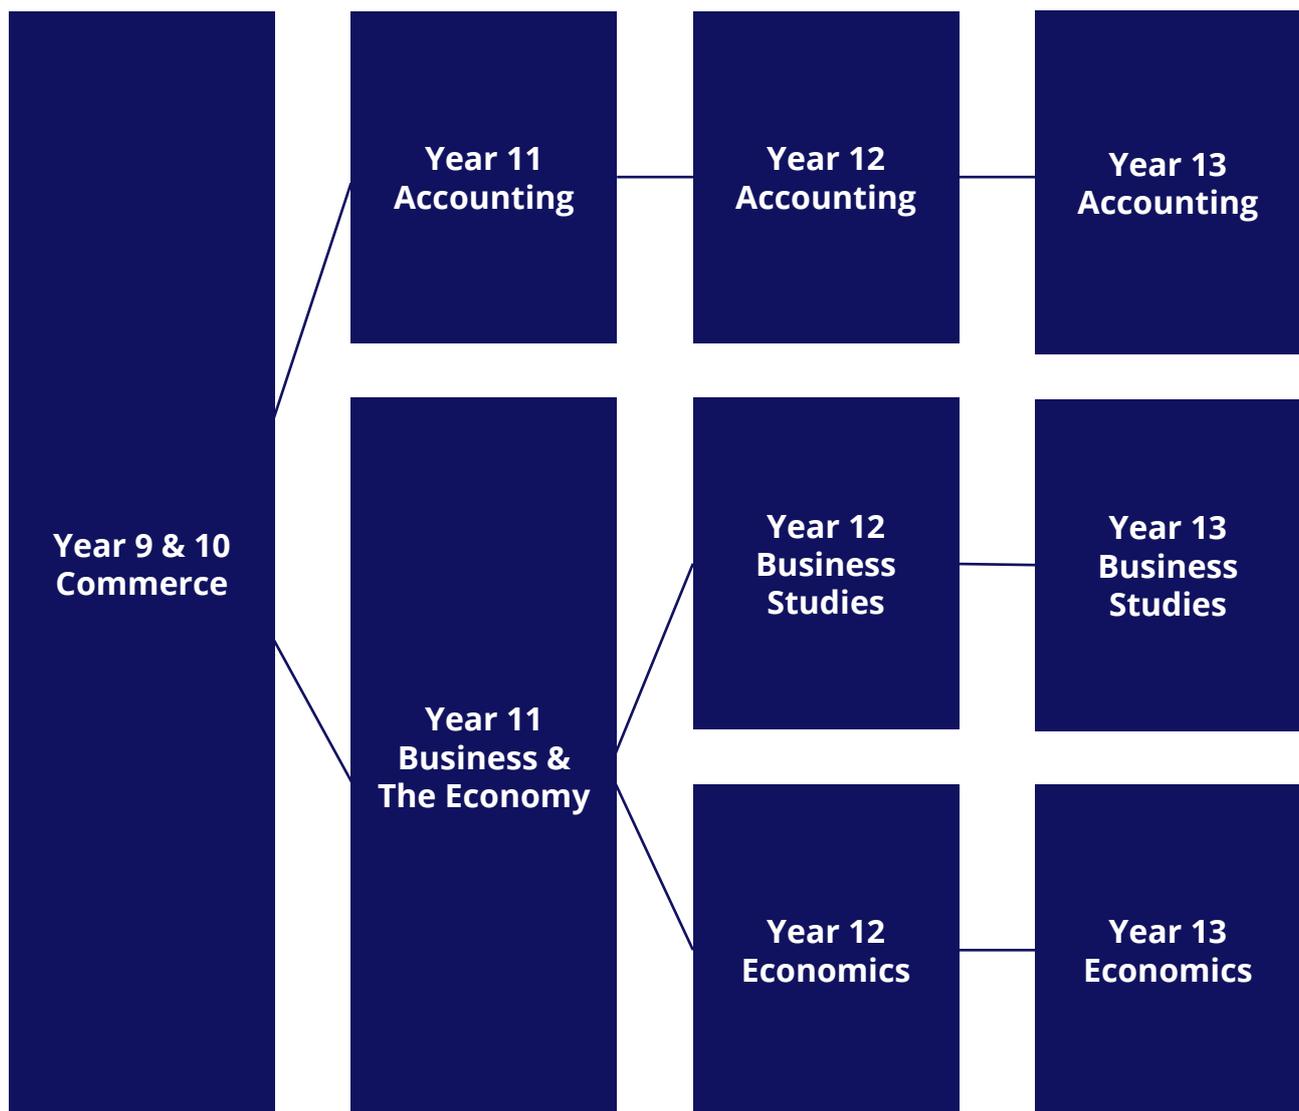

Year 13 Economics looks at how firms, markets and the economy function. Students will study different types of markets, such as monopolies and oligopolies, how firms compete and how they set prices. The course at this level also focuses on other factors which influence the economy including interest rates changes (monetary policy), government spending (fiscal policy) and international influences.

Business Studies is the study of business theory and practice within a range of relevant contexts, where students develop their understanding through experiential as well as theoretical approaches to learning.

Year 12 Business Studies introduces students to business concepts such as market research, business planning, and the internal operations of a business. Students will also carry out market research to inform their business plan and carry out the actual business through 2 separate cycles that are reviewed and refined. The course at Level 2 offers students understanding of both theory and practical aspects of business and provides learning experiences that challenge and stretch them academically and practically.

Year 13 Business Studies explores businesses that operate in a global context. Students will examine how such businesses respond to internal and external factors. Students will be introduced to Human Resources as one of the four key functions of business and research a specific HR issue in New Zealand. They will also create a marketing plan for a product, which consolidates previous understanding of marketing and requires students to develop real life business marketing strategies.

ENGLISH DEPARTMENT OVERVIEW

YEAR 11-13

What is English about?

English is the study, use, and enjoyment of the English language and its literature, communicated orally, visually, and in writing, for a range of purposes and audiences and in a variety of text forms. Understanding, using, and creating oral, written, and visual texts of increasing complexity is at the heart of English teaching and learning. By engaging with text-based activities, students become increasingly skilled and sophisticated speakers and listeners, writers and readers, presenters and viewers.

Why study English?

Literacy in English gives students access to the understanding, knowledge, and skills they need to participate fully in the social, cultural and economic life of New Zealand and the wider world. To be successful participants, they need to be effective oral, written, and visual communicators who are able to think critically and in depth. By understanding how language works, students are equipped to make appropriate language choices and apply them in a range of contexts. Students learn to deconstruct and critically interrogate texts in order to understand the power of language to enrich and shape their own and others' lives.

Success in English is fundamental to success across the curriculum. All learning areas (with the possible exception of languages) require students to receive, process, and present ideas or information using the English language as a medium. English can be studied both as a heritage language and as an additional language.

How is the learning area structured?

English is structured around two interconnected strands, each encompassing the oral, written, and visual forms of the language. The strands differentiate between the modes in which students are primarily:

- Making meaning of ideas or information they receive (**listening, reading, and viewing**)
- Creating meaning for themselves or others (**speaking, writing, and presenting**)

The achievement objectives within each strand suggest progressions through which most students move as they become more effective oral, written, and visual communicators. Using a set of underpinning processes and strategies, students develop knowledge, skills, and understandings related to:

- Text purposes and audiences
- Ideas within language contexts
- Language features that enhance texts
- The structure and organisation of texts

Students need to practise **making meaning** and **creating meaning** at each level of the curriculum. This need is reflected in the way that the achievement objectives are structured. As they progress, students use their skills to engage with tasks and texts that are increasingly sophisticated and challenging, and they do this in increasing depth.

Year 9 and 10

The Junior English programme covers the two strands of the New Zealand English Curriculum: Creating Meaning and Making Meaning. In each year of the programme, students study four term-long units that introduce them to the study of literature at secondary level.

Students are expected to undertake a wide and thoughtful reading programme. In addition, they are assisted to write accurately and effectively in a range of registers. Through explicit inclusion of the Key Competencies in the unit planning, students are encouraged to develop self-directed learning behaviours.

Year 11 (NCEA Level 1)

Description: The key areas covered in this course are reading skills, response to text, writing and production skills. Students study a range of literary genres, including short story, poetry, non-fiction and oral text or film while learning to respond critically to written and visual unfamiliar texts. Writing skills are developed throughout the year in the preparation of assessments. Students are encouraged to develop their oral skills by taking part in class discussions, speech delivery and cooperative learning activities. Students are supported to continue developing the skills required to become self-directed, lifelong learners.

Year 12 (NCEA Level 2)

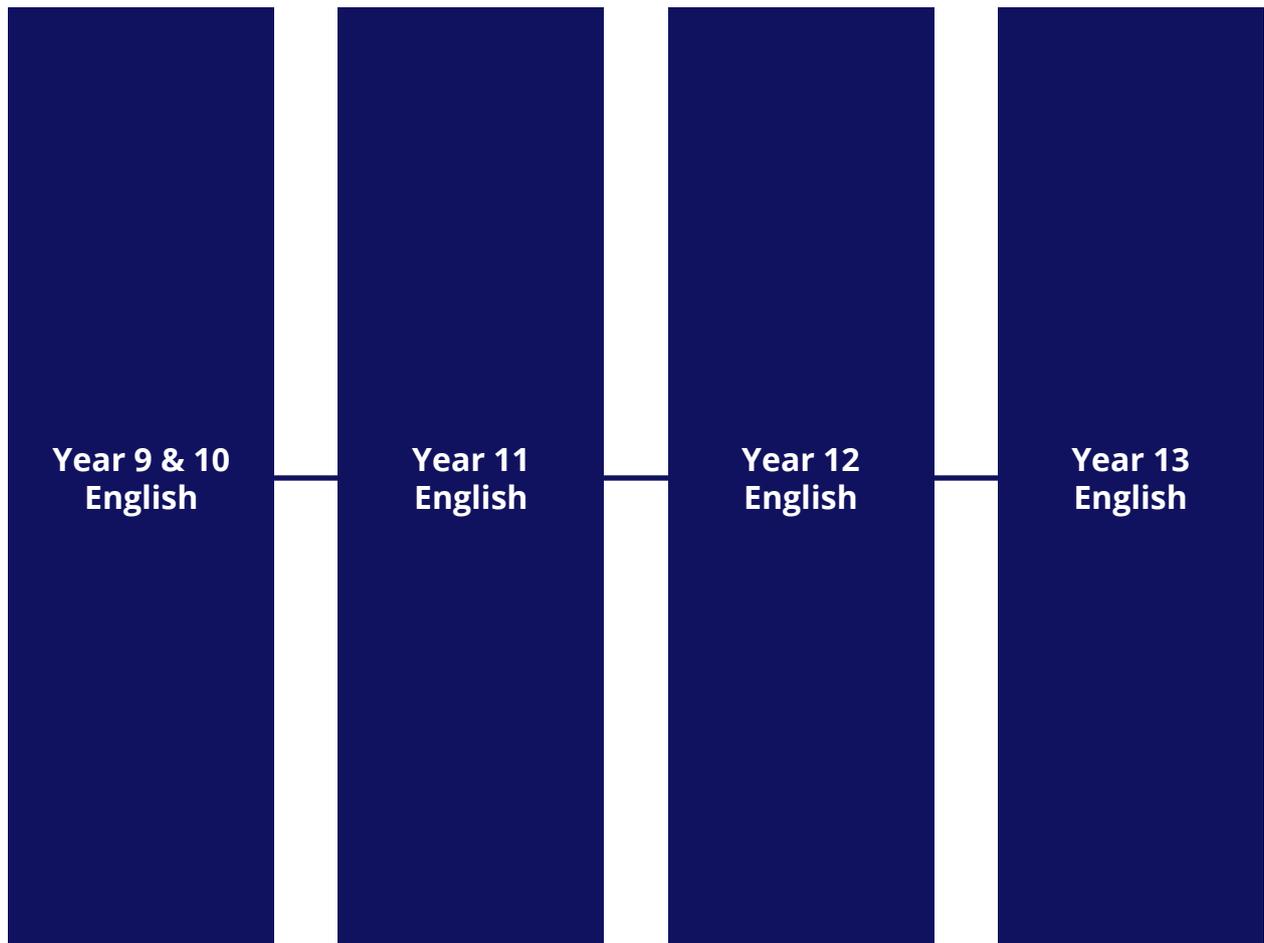

Description: The study of language and literature are key elements in this course. An in-depth analytical study of academic poetry, short stories, non-fiction, Shakespearean Drama and a feature length film can be undertaken in this course. Students will continue to build on the writing skills developed at Level 1. Critical thinking skills and the close reading of unfamiliar texts with an emphasis on techniques relating to reader / writer purpose will also be developed.

Year 13 (NCEA Level 3)

Description: This is a course requiring students to demonstrate a critical response to a range of written and visual literary texts which include academic poetry and short stories, non-fiction and a feature length film. All students will be required to produce an extended piece of writing in a selected style and to deliver an oral presentation. Critical analysis and close reading of unfamiliar texts with an emphasis on appreciation of stylistic features will be developed.

2	90857	2	1	3	L1 Lit	English 1.6 - Construct and deliver an oral text	Oral presentation	1	T2 W3	
3	90855	2	1	3	L1 Lit	English 1.7 - Create a visual text	Assignment	1	T3 W4	
4	90852	3	1	4	L1 Lit	English 1.8 - Explain significant connection(s) across texts, using supporting evidence	Assignment	1	T2 W2	
5	90849	2	1	4	L1 Lit	English 1.1 - Show understanding of specified aspect(s) of studied written text(s), using supporting evidence	Exam	External		
6	90850	5	1	4	L1 Lit	English 1.2 - Show understanding of specified aspect(s) of studied visual or oral text(s), using supporting evidence	Exam	External		

Subject Course Outline will give details on further assessment opportunities, assessment conditions, and authenticity procedures.

Assessment Handbook gives details of the NCEA processes, including; resubmission, appeals, derived grade and special assessment conditions. Talk to your NCEA Co-ordinator for details. Each student will receive a handbook at the beginning of the year.

FRENCH DEPARTMENT OVERVIEW

YEAR 11-13

“One language sets you in a corridor for life. Two languages open every door along the way” – Frank Smith

Why learn another language?

As global citizens, it is now more important than ever to learn a second language. Travel opportunities aside, speaking an additional language allows you to compete in the global market place and to grow in cross-cultural communication. The benefits to businesses are significant; establishing new markets and securing international contracts. Learning another language also improves your overall academic performance with studies consistently showing:

- Improved problem solving skills
- Improved memory skills
- Improved perception skills
- Improved decision making skills

Learning another language also helps to sharpen your English skills as foreign language learners have stronger vocabulary skills, a better understanding of grammar and improved literacy in general.

Why learn French?

French is spoken widely throughout the world as both a first and a second language. It is spoken by over 200 million people in over 40 different countries. It is the official language in over 20 countries and is the language of our closest neighbour, New Caledonia. As French and English have borrowed extensively from each other over the years, the languages share a wide range of concepts and vocabulary. This makes French once of the easiest languages for English speakers to learn. France is one of the world’s largest economies and there is significant French investment in New Zealand.

What can I expect?

The Westmount French programme is designed to improve students’ confidence and fluency in four key skills: speaking, listening, reading and writing. The programme is well supported by online resources which allow self-directed learning to continue from home.

A brief outline of the programme is as follows:

Year 11 French (NCEA Level 1)

Description: Students will learn to interact with French speakers in familiar and social situations. They will be able to use basic language patterns spontaneously and can write short passages, personal letters and simple formal letters. Topics covered include school, my hometown, holidays and health.

Year 12 French (NCEA Level 2)

Description: Students are becoming increasingly proficient in their use of the French language and will be able to take part in general conversation with French speakers, understand much of what is said and contribute relevant comments. They can read a variety of authentic materials and write expressively for a range of purposes. Topics covered include la Francophonie, traditional stories and leisure.

Year 13 French (NCEA Level 3)

Description: The Year 13 French course builds on the skills developed during Year 12 French. Students will be able to convey their point of view and respond to selected texts from French speaking cultures. Topics covered include regions in France, our changing world and the environment.

LANGUAGES 11FRE ASSESSMENT STATEMENT 2018

Course is endorsable

Year :11		Course: French					Total Credits :24		
<p>Course Description: In this course, students develop their fluency in the French language and improve their listening, speaking, reading and writing skills.</p> <p>Entry Guidelines: Students need to have a sound knowledge and understanding of Levels 1 to 4 of French of the New Zealand Curriculum, at the discretion of the Lead Teacher.</p>									
No	Standard Number	Version	Level	Credits	Lit /Num	Full Title	Method of Assessment	Assessment Opportunities Offered	Approximate Date
1	90882	2	1	5		French 1.5 - Write a variety of text types in French on areas of most immediate relevance	Portfolio	1	T3W9
2	90880	2	1	5		French 1.3 - Interact using spoken French to communicate personal information, ideas and opinions in different situations	Portfolio	1	T3W9
3	90878	2	1	5		French 1.1 - Demonstrate understanding of a variety of spoken French texts on areas of most immediate relevance	Exam	External	
4	90881	2	1	5		French 1.4 - Demonstrate understanding of a variety of French texts on areas of most immediate relevance	Exam	External	
5	90879	2	1	4		French 1.2 Give a spoken presentation in French that communicates a personal response	Presentation	1	T2 W9

Subject Course Outline will give details on further assessment opportunities, assessment conditions, and authenticity procedures.

Assessment Handbook gives details of the NCEA processes, including; resubmission, appeals, derived grade and special assessment conditions. Talk to your NCEA Co-ordinator for details. Each student will receive a handbook at the beginning of the year.

MATHEMATICS DEPARTMENT OVERVIEW

YEAR 11-13

The mathematics programme at Westmount School is designed to promote the use of the brain as both a calculating and a thinking tool. It is used to promote the realisation that each individual is capable of retaining knowledge as well as the thinking required to work out what needs to be done to come to a solution in certain situations.

Year 9 and 10 students will be using a calculator more to solve problems of a greater complexity. They will be extending their knowledge of number skills and statistics, probability, geometric and measurement concepts and will begin to do more work on graphing patterns, algebra and interpreting the information they are given. In year 10 they will also do one assessment on measurement for the national qualification and begin to learn trigonometry.

The programme will also enable students to understand mathematics to such an extent that they will be able to achieve with confidence in the national qualifications, NCEA1, 2 and 3 in Years 11 to 13.

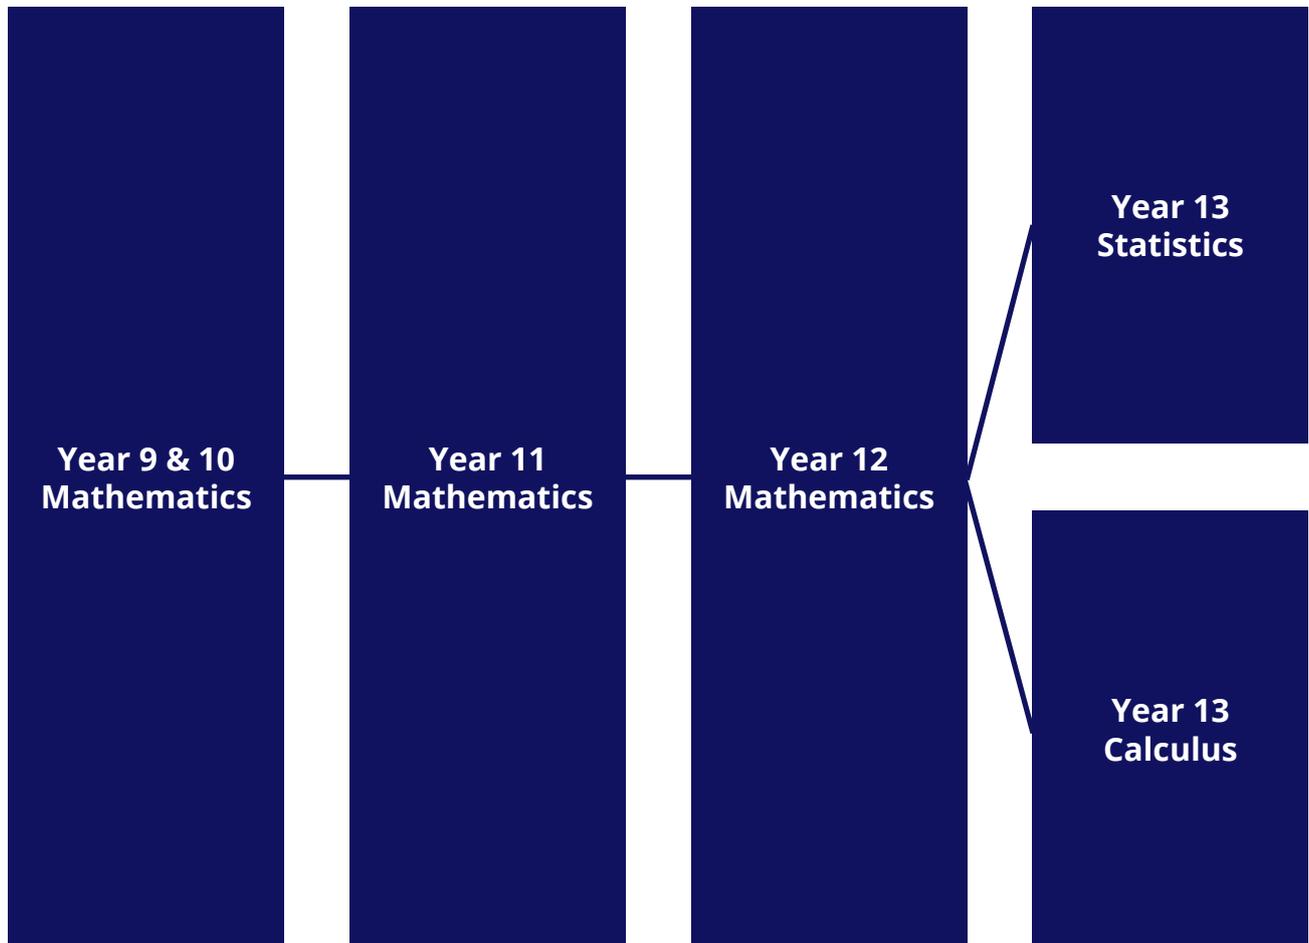

In year 13 students can choose to specialise by taking the Calculus course.

In years 11 to 13 students will be focusing on learning to a level such that they can be successful with the national qualifications. Some national assessments are done in exam situations at the end of the year and some will be assessed during the year. These years are intensive learning times and students must work consistently to keep up.

There will be Westmount School Exams near the end of term 3. These will help students and parents see what has been achieved and what still needs to be done in readiness for formal assessments.

Mathematics Year Level Structure

PHYSICAL EDUCATION DEPARTMENT OVERVIEW

YEAR 11-13

Overview of the department

- Westmount Physical Education Department offers a full NCEA accredited course at year 11, 12 and 13.
- Year 12 NCEA PE offers a standard course of 20 credits, this includes the 4 credit performance standard now being worked on across both the core PE and NCEA PE courses. There is an extension standard offered to suitable candidates, this is worth an additional four credits.
- It is **fully internally assessed**, with assessment opportunities being varied to suit a wide range of learning styles.
 - » Practical
 - » Participation
 - » Reflective worksheet activities
 - » Assignments
 - » Verbal assessment

Why a student would want to take these subjects

- Put your theory into practice – one solely practical standard, remainder are experience based with theory component -Understand the inner and outer workings of the human body – not just physical!
- Look at the social impact of PE on individuals and societies at a local and international level i.e. World Cups and Olympics included!

Reasons for selecting Physical Education:

- You have an interest and enjoyment of physical activity.
- You are interested in developing the life skills of communication, personal responsibility, goal setting and reflection (and many more)
- You are interested in learning about how the body functions and can be improved through targeted training.
- You are prepared to work hard throughout the school year (we only have internal assessments!)

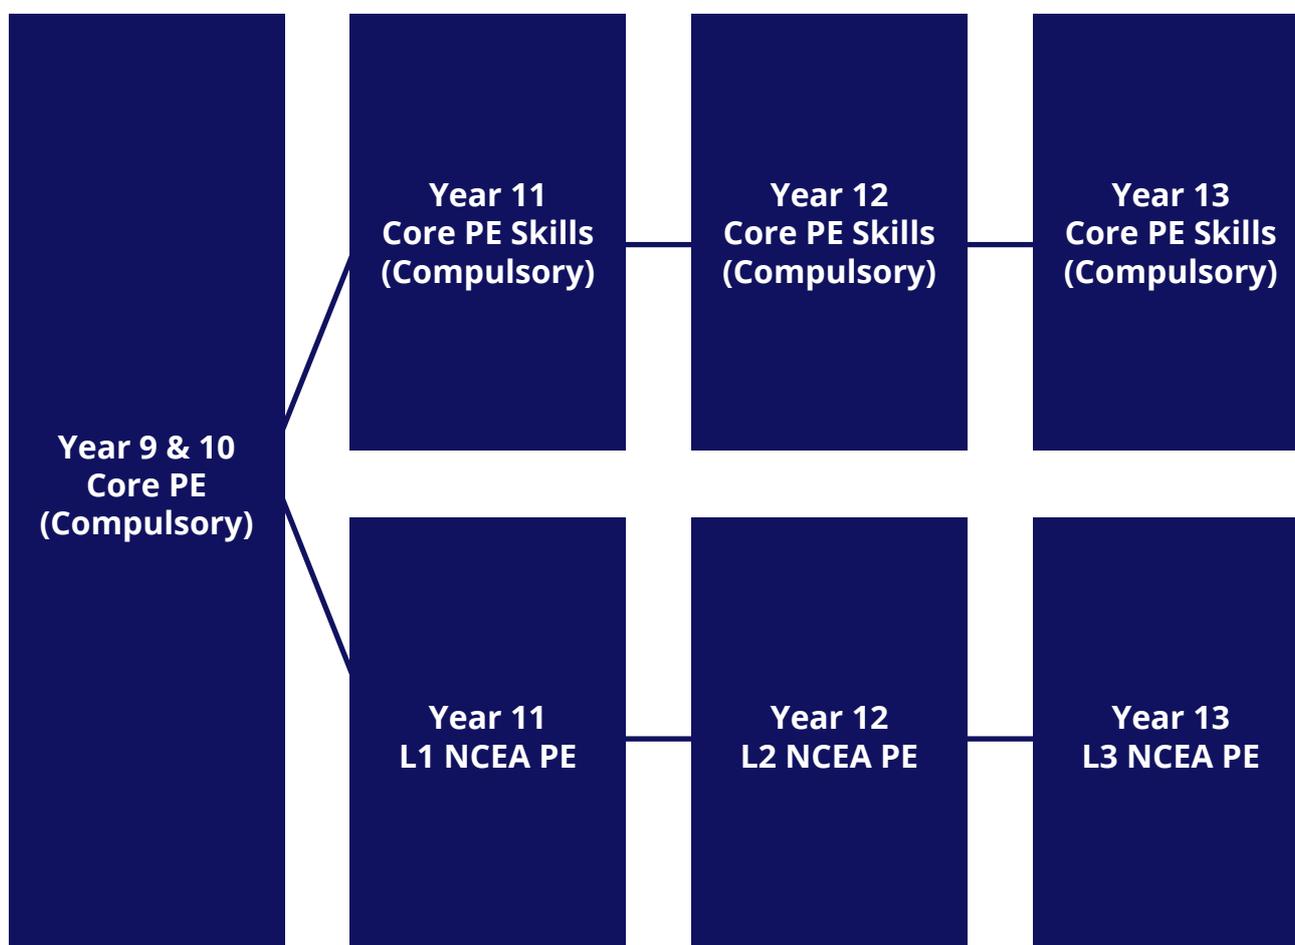

Skills to be gained from the NCEA PE course:

- NCEA Physical Education is often misunderstood, while it does include high levels of physical activity, the quality of your physical ability is assessed in only one achievement standard per year. This course does have a written component
- Skills taught in this course include:
 - » Broad anatomy, physiology and biomechanical knowledge in relation to sport and exercise contexts
 - » Personal goal setting and programme development
 - » Interpersonal and leadership skills
 - » Time management and goal setting
 - » Performance analysis of both self and others
 - » Critical evaluation

NB: It is necessary to pass Level 1 NCEA PE before entering into a Level 2 or 3 NCEA PE course. However special permission for entry into these senior courses may be granted at the Curriculum Leader's discretion on a case by case basis.

Physical Education Year Level Structure

SCIENCE DEPARTMENT OVERVIEW

YEAR 11-13

Why would you want to take these subjects?

Science subjects will improve your understanding of why and how the world works. It will develop your ability to think critically and produce innovative solutions to problems you are faced with. Studying science improves our ability to understand today's big issues, make informed decisions and assess the credibility, reliability, and validity of what we see and hear. Each senior subject builds on the previous years' work, improving your understanding and investigative skills. Senior Chemistry develops your understanding of chemicals and their practical applications through investigative work. Horticulture at year 12 focuses on the growth of plants while at year 13 the focus is on the Marketing of Horticultural products. Physics develops your skills in scientific inquiry, investigating patterns in physical concepts and is for the mathematically or logically minded. General Science is a course for students who would like to do a general course covering aspects of Chemistry, Physics, Biology and Earth Science.

Skills you as a student will be gaining by taking these subjects.

Science will teach you the necessary competencies to become an excellent self-directed learner once you leave the schooling environment. The new curriculum has modified the way we look at Science education. It is now focused around a set of skills known as the Nature of Science that underpin all knowledge strands within the curriculum. They are:

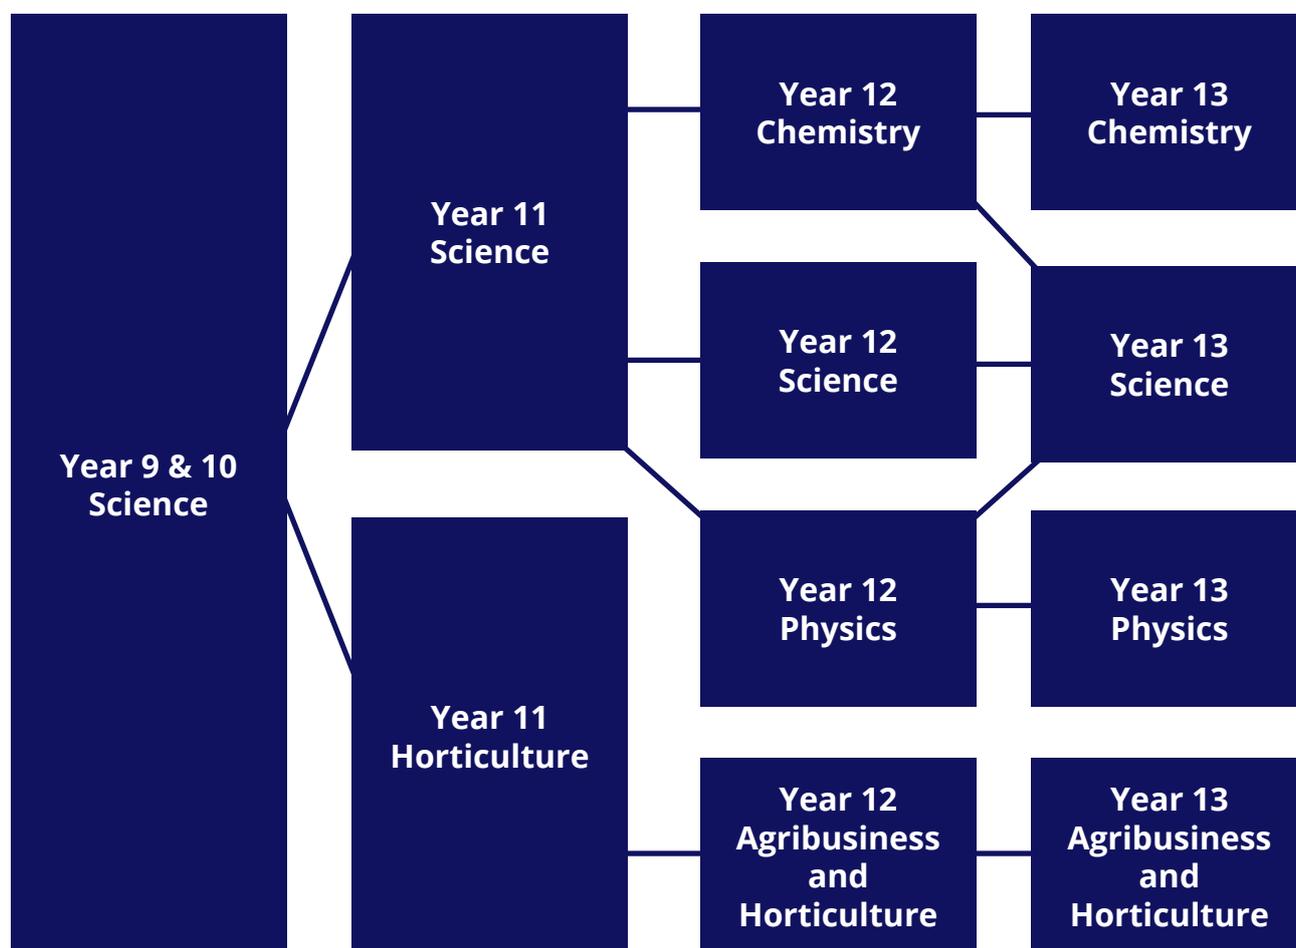

- Understanding – collecting evidence and forming logical discussion
- Investigating – Working through a problem in a Scientific way
- Communicating – Improving on literacy and broadening vocabulary
- Participating and contributing – Drawing evidence based conclusions and taking action

These four skills are the backbone for any persons' development as they are essential skills in the life-long development of an individual's ability to learn. All of the subjects shown in the diagram will develop your abilities in the skills listed. You need a basic understanding of science to cope with the challenges of technology in the world. Many of the Science subjects are also essential in the Engineering, Architecture, Science, Agriculture, Horticulture and many other vocations. You as a student will learn to become innovative, by working through the scientific process. This will involve you asking questions, researching, figuring out how you might investigate the problem, gathering data and interpreting the results to come up with valid conclusions. This is the process used in any business when undertaking any research or development work to develop a new product or idea.

What is new – Some new Agribusiness standards are being introduced in Year 12 Horticulture course. Agribusiness is defined as a course of study that integrates all the primary industries and businesses. Primary industries comprises a group of sectors including; agriculture, aquaculture, dairy manufacturing, equine, forestry, horticulture, seafood, and sports turf that form the basis of modern primary.

4	90944	4	1	4		Science 1.5 - Demonstrate understanding of aspects of acids and bases	External Exam	External1	T4	

Subject Course Outline will give details on further assessment opportunities, assessment conditions, and authenticity procedures.

Assessment Handbook gives details of the NCEA processes, including; resubmission, appeals, derived grade and special assessment conditions. Talk to your NCEA Co-ordinator for details. Each student will receive a handbook at the beginning of the year.

SOCIAL SCIENCES DEPARTMENT OVERVIEW

Why Study Geography?

Because Geography equips students with skills for the future

Geography stimulates a sense of wonder about the world

Geography students are better able to make sense of a complex and changing world and their place in it. In geography, students have the opportunity to:

- build on and expand their personal experiences of natural and cultural environment
- Geography equips students with the knowledge and skills to interpret the world in which they live
- explore real and relevant contemporary contexts
- think spatially – explore the ways in which features are arranged on the earth's surface
- look at the processes that shape our world
- undertake fieldwork investigations in different locations outside the classroom
- develop an awareness of the connections between people and places
- participate in informed responsible action in relation to geographic issues that affect them

Geography inspires students to help shape a better future

By studying geography, students are able to recognise the responsibilities they have in relation to other people, the environment, and the long-term sustainability of the planet. Geography encourages students to think critically as they:

- investigate contemporary geographic issues and consider possible solutions
- explore the various perspectives of different groups of people
- investigate important issues of relevance to New Zealand and the wider world

Year 11: learn about the world we live in including earthquakes, tsunamis, resource use, coastal erosion.

Year 12: discover NZ landscapes and processes, global disease, affluenza, urban settlements.

Year 13: examine natural landscapes, tourism, global commodity patterns, geo-politics.

Why Study History?

History is simply yesterday's news. It connects us to the past, gives meaning to the present and helps us try to avoid repeating the mistakes of the type that have caused large scale destruction and at times global chaos. History is not simply a series of events and dates. It helps us to understand ourselves and our society, gives us a sense of identity and an understanding of our place in the world. Historians are concerned with seeking explanations about what actions people have taken in the past as well as what has motivated them. History is especially relevant in a world where 24/7 coverage of events requires us to be able to detect fake news, work out what photographs have been photo-shopped, critique video footage, analyse perspectives, determine which web sites are reliable and which are not, identify bias, and sift out why one person's truth is another person's lies.

Skills

History students will learn how to:

- Develop clear, critical thinking skills
- Research and collect information from a variety of sources
- Determine the reliability and usefulness of primary and secondary sources
- Recognise differing points of view
- Detect bias and propaganda
- Communicate effectively

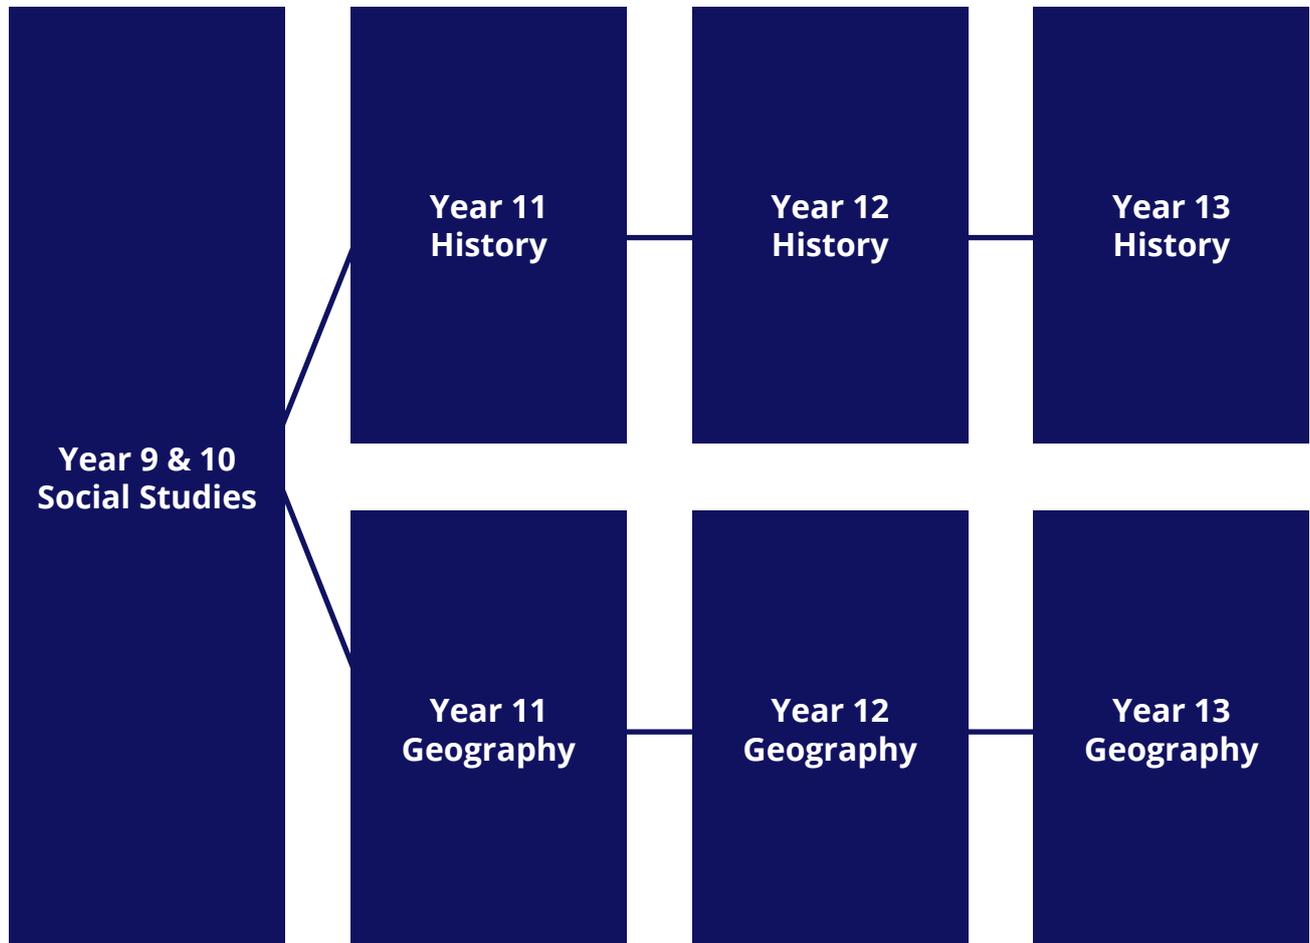

Year 11 is all about studying events that are of significance to New Zealanders. We examine significant events leading up to the WWII and the Civil Rights movement in America.

Year 12 focusses on historical events in the twentieth century which had a significant effect on New Zealand. Our main focus is the Russian Revolution and The Vietnam War.

Year 13 is about New Zealand's early History and place in the world. This help us understand how the issues we face in New Zealand today are linked to our past as well as our place in an increasingly mobile and inter-linked global community.

Social Sciences Year Level Structure

SOCIAL SCIENCES 11GEO ASSESSMENT STATEMENT 2018

Course is endorsable

Year 11		Course: Geography			Total: Credits 18	
<p>Course Description: In this course, students discover topics including earthquakes and tsunamis, global patterns and contemporary New Zealand issues. Develop skills including practical investigations, writing reports, map and aerial photo interpretation, construction and interpretation of statistical diagrams, along with understanding cultural ideas and the perspectives of people. A range of field work skills are taught and are used.</p> <p>Entry Guidelines: Open entry, but students should be confident in their writing skills.</p>						
Standard	Credits	Title	Method of Assessment	Assessment Opportunities	Approximate Date	
91011	4	Geography 1.5 - Conduct geographic research	Assignment	1	T2 W7	Internal
91012	3	Geography 1.6 - Describe a contemporary NZ geographic issue	Assignment	1	T1 W10	Internal
91013	3	Geography 1.7 - Describe a geographic topic at a global scale	Assignment	1	T1 W5	Internal
91007	4	Geography 1.1 - Demonstrate geographic understanding of environments that have been shaped by extreme natural events	Exam			External
91010	4	Geography 1.4 - Apply concepts and geographic skills to demonstrate understanding of a given environment	Exam			External

Subject Course Outline will give details on further assessment opportunities, assessment conditions, and authenticity procedures.

Assessment Handbook gives details of the NCEA processes, including; resubmission, appeals, derived grade and special assessment conditions. Talk to your NCEA Co-ordinator for details. Each student will receive a handbook at the beginning of the year.

SOCIAL SCIENCES 11HIS ASSESSMENT STATEMENT 2018

Course is endorsable

Year 11		Course: History			Total Credits: 20	
<p>Course Description: Year 11 History is all about studying events that shaped the 20th century as well as episodes that helped define us as nation. Our key studies are the Origins of World War II and the Civil Rights Movement in the USA. In addition, the students will conduct research into an event of interest to New Zealanders.</p> <p>Entry Guidelines: Open entry, but students should be confident in their writing skills.</p>						
Standard	Credits	Title	Method of Assessment	Assessment Opportunities	Approximate Date	
91001	4	History 1.1 - Carry out an investigation of an historical event, or place, of significance to New Zealanders	Assignment	1	T1 W6	
91002	4	History 1.2 - Demonstrate understanding of an historical event, or place, of significance to New Zealanders	Assignment	1	T1 W10	Internal
91004	4	History 1.4 - Demonstrate understanding of different perspectives of people in an historical event of significance to New Zealanders	Assignment	1	T2 W8	
91003	4	History 1.3 - Interpret sources of an historical event of significance to New Zealanders	Exam			External
91005	4	History 1.5 - Describe the causes and consequences of an historical event	Exam			External

Subject Course Outline will give details on further assessment opportunities, assessment conditions, and authenticity procedures.

Assessment Handbook gives details of the NCEA processes, including; resubmission, appeals, derived grade and special assessment conditions. Talk to your NCEA Co-ordinator for details. Each student will receive a handbook at the beginning of the year.

TECHNOLOGY DEPARTMENT OVERVIEW

YEAR 11-13

The Technology Department includes the subject areas of Materials Technology, Food and Textiles Technology and Design and Visual Communication (DVC)

What is Technology?

Technology is intervention by design in which students design and develop products, systems or environments to meet peoples varying needs. A mix of knowledge, skills and resources are used to solve practical problems. The main technological areas are: food technology, materials technology including textiles and structures and mechanisms. Students research, plan and generate ideas for possible outcomes. They develop their own concepts and evaluate the outcomes. Practical outcomes are created with the use of a variety of materials and construction techniques.

Technology offers students the opportunity to work in an area that interests them. This could be in food technology, materials and textiles or Design and Visual Communications. Students are encouraged to plan and work with materials of their choice to help solve a variety of problems. Throughout the course students develop their technological practice and apply their technological knowledge to find out about the nature of technology in their selected field.

Subject: Technology - Resistant Materials Levels 1 – 3.

Course Outline: These courses provide a progression each year with a major focus on product development using Resistant Materials. Students will apply a technology process to the investigation of an issue and development of products to meet needs or opportunities which they identify. Practical skills, product trials and the production of final products form a major component of this subject. Students will also be required to present a portfolio documenting their process and providing evidence of their learning. Both practical product and portfolio contribute to assessments.

Subject: Technology – Food Technology Levels 1 – 3.

Course Outline: Food technology provides students with an opportunity to work through the design process to use informed planning to guide them through the technological process. This will include planning and problem-solving, research, product trials, evaluation, stakeholder consultation and production of food products. Students will be encouraged to explore a range of foods and production processes relating to the issue(s) within the given context. Both practical product and portfolio contribute to assessments.

Subject: Technology – Textiles Technology Levels 1 – 3.

Course Outline: Textiles Technology provides students with an opportunity to work through a design process and use informed planning to guide them through the technological process. This will include design and problem solving, research, evaluation and construction. They will be encouraged to explore a range of materials and processes relating to the issue(s) within given contexts. Both practical product and portfolio contribute to assessments.

NOTE: Level 1 Food and Textiles is a combined one-year course

Subject: Design and Visual Communications Levels 1 – 3.

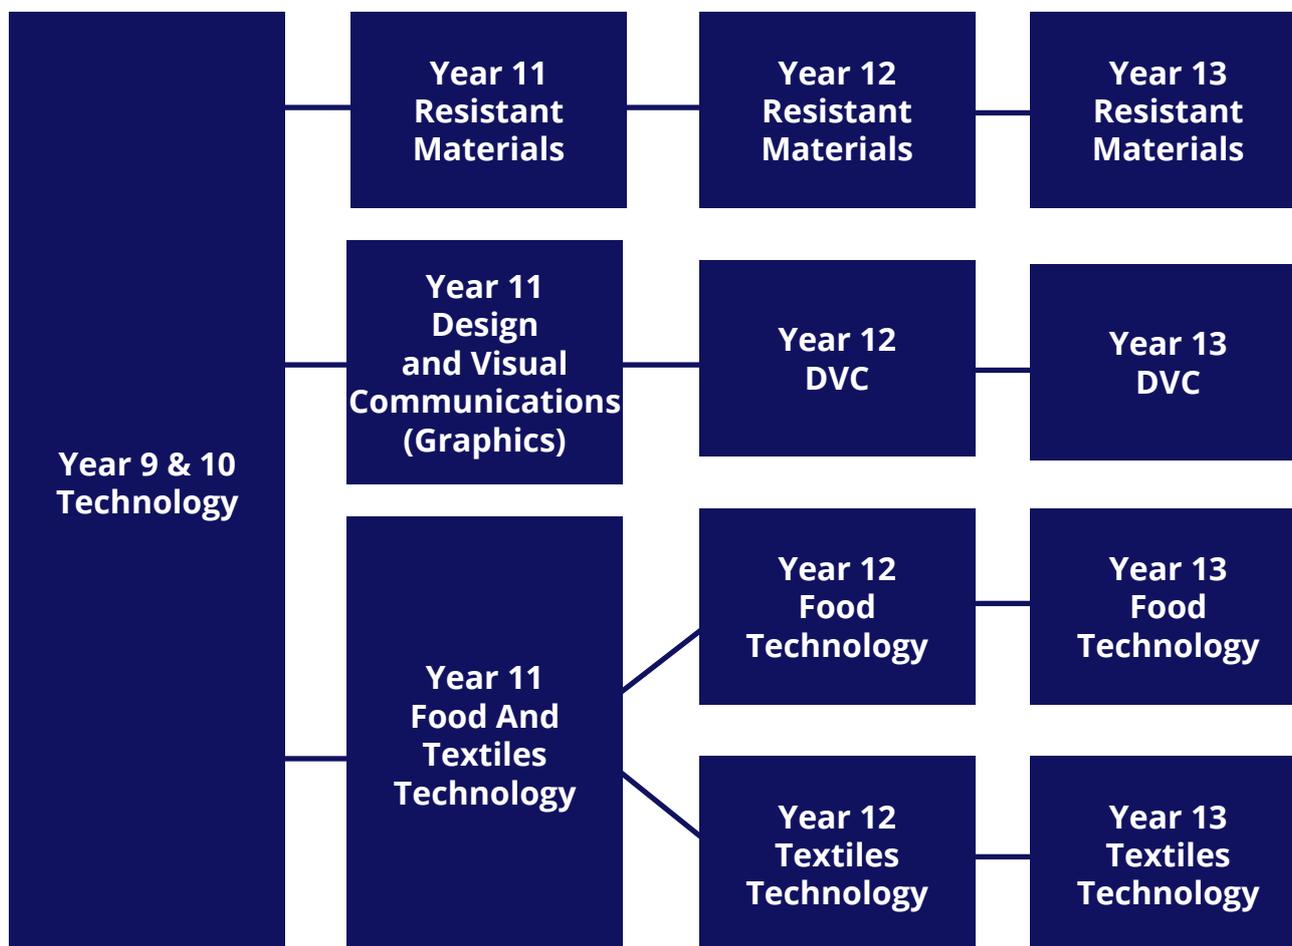

What is Design and Visual Communications (DVC)?

Design and visual communication connects strongly to the technology learning area and supports a particular form of technological practice that employs visual communication knowledge and techniques to develop conceptual designs or technological outcomes of a graphical nature. Graphics investigates the drawing and design process, to give students the necessary skills to solve a range of design problems. Design, sketching, colour rendering, formal working drawings and presentation techniques are used to find solutions to given design problems

Course Outline: Students will engage in graphics practice to solve given problems following a recognised design process. This will involve researching, generating and testing ideas to solve real life problems or issues. Evidence will be documented in a variety of ways including sketching, rendering, annotation, making mock ups and models and instrumental drawings to convey information and solve real life problems. Design is an integral part of the technological process and involves identifying and analysing problems, developing briefs, creating, developing and evaluating ideas using logic and knowledge

Technology Year Level Structure

TECHNOLOGY 11DVC ASSESSMENT STATEMENT 2018

Course is endorsable

Year :11		Course: Design and Visual Communication					Total Credits :18			
<p>Course Description: Students will spend term 1 learning DVC drawing skills then will work on two design assignments during the year. One of these will be marked for the internal Achievement Standards, and then a selection of work will be sent away to NZQA early November for the external Standards. A sample of the students rendering skills will be assessed for 1.33. A course book detailing the full year's programme will be given out at the beginning of the year.</p> <p>Entry guidelines: Students wishing to take graphics will have some prior knowledge gained through undertaking a technology programme in the junior school.</p>										
No	Standard Number	Version	Level	Credits	Lit/Num	Full Title	Method of Assessment	Assessment Opportunities Offered	Approximate Date	
1	91066	3	1	3		Design and Visual Communication 1.33 - Use rendering techniques to communicate the form of design ideas	Portfolio	1	T4 W3	
2	91068	4	1	6		Design and Visual Communication 1.35 - Undertake development of design ideas through graphics practice	Portfolio	1	T3 W7	
3	91063	4	1	3		Design and Visual Communication 1.30 - Produce freehand sketches that communicate design ideas	Portfolio	External1	October	
4	91065	4	1	3	Num	Design and Visual Communication 1.32 - Produce instrumental paraline drawings to communicate design ideas	Portfolio	External1	October	
5	91064	4	1	3	Num	Design and Visual Communication 1.31 - Produce instrumental, multi-view orthographic drawings that communicate technical features of design ideas	Portfolio	External	October	

Subject Course Outline will give details on further assessment opportunities, assessment conditions, and authenticity procedures.

Assessment Handbook gives details of the NCEA processes, including; resubmission, appeals, derived grade and special assessment conditions. Talk to your NCEA Co-ordinator for details. Each student will receive a handbook at the beginning of the year.

TECHNOLOGY 11FOD ASSESSMENT STATEMENT 2018

Course is endorsable

Year :11		Course: Food and Textiles Technology					Total Credits :20			
<p>Course Description: Two 15 week semesters comprising of food technology and textiles technology. The textiles semester involves designing and making a garment suitable to wear to church. The food semester involves learning about testing plus trailing cake stall items. Textiles and food work are to be completed and assessed in portfolio format.</p> <p>Entry Guidelines: Students wishing to take food and textiles will have some prior knowledge gained through undertaking a technology programme in the junior school. Textiles semester (January to Queens Birthday and Food semester is Queens Birthday until November.</p>										
No	Standard Number	Version	Level	Credits	Lit / Num	Full Title	Method of Assessment	Assessment Opportunities Offered	Approximate Date	
1	91044	3	1	4	L1 Lit	Generic Technology 1.1 - Undertake brief development to address a need or opportunity	Portfolio	1	June	
2	91045	3	1	4		Generic Technology 1.2 - Use planning tools to guide the technological development of an outcome to address a brief	Portfolio	1	November	
3	91060	3	1	4	L1 Lit	Construction and Mechanical Technologies 1.23 - Demonstrate understanding of basic concepts used to make products from textile materials	Portfolio	1	June	
4	91083	3	1	4	L1 Lit	Processing Technologies 1.61 - Demonstrate understanding of basic concepts used in processing	Portfolio	1	November	
5	91048	3	1	4	L1 Lit	Generic Technology 1.5 - Demonstrate understanding of how technological modelling supports decision-making	Report	External		

Subject Course Outline will give details on further assessment opportunities, assessment conditions, and authenticity procedures.

Assessment Handbook gives details of the NCEA processes, including; resubmission, appeals, derived grade and special assessment conditions. Talk to your NCEA Co-ordinator for details. Each student will receive a handbook at the beginning of the year.

TECHNOLOGY 11TEC ASSESSMENT STATEMENT 2018

Course is endorsable

Year :11		Course: Technology Resistant Materials					Total Credits :18			
<p>Course Description: Students will complete one set practical project during terms 1, 2 and part of term 3. This work will be assessed for the internal standards 1.1 and 1.4. For the rest of the year you will be working on 1.5 and 1.6, the two external standards which are sent away for marking by NZQA early November. There are no set exams in November for this subject.</p> <p>Entry Guidelines: Students wishing to take this subject will need to have some prior knowledge gained through undertaking a technology programme at the junior level.</p>										
No	Standard Number	Version	Level	Credits	Lit /Num	Full Title	Method of Assessment	Assessment Opportunities Offered	Approximate Date	
1	91044	3	1	4	L1 Lit	Generic Technology 1.1 - Undertake brief development to address a need or opportunity	Portfolio	1	T3 W3	
2	91047	3	1	6		Generic Technology 1.4 - Undertake development to make a prototype to address a brief	Portfolio	1	T3 W3	
3	91049	3	1	4	L1 Lit	Generic Technology 1.6 - Demonstrate understanding of how materials enable technological products to function	Report	External1		
4	91048	3	1	4	L1 Lit	Generic Technology 1.5 - Demonstrate understanding of how technological modelling supports decision-making	Report	External		

Subject Course Outline will give details on further assessment opportunities, assessment conditions, and authenticity procedures.

Assessment Handbook gives details of the NCEA processes, including; resubmission, appeals, derived grade and special assessment conditions. Talk to your NCEA Co-ordinator for details. Each student will receive a handbook at the beginning of the year.

MAKING MY CHOICES

Use this page to list information that might help you decide which subjects to choose.

My Interests What I like doing	My Qualities What I am like as a person
My Skills What I do well	My favourite subjects
Questions I have about my subject choices	

PLANNING MY COURSE

Highlight the option subjects you are interested in for your 2018 year and the subjects you might take in future years.

My subject choices Year 11 (6 NCEA Level 1 subjects)	Could lead to Year 12 (5 NCEA Level 2 subjects)	Could lead to Year 13 (5 NCEA Level 3 subjects)
Compulsory subjects	Compulsory subjects	Compulsory subjects
